Internals of RHA
# RHA: Revised Hashing Algorithm...

RHA (**Revised Hashing Algorithm)** produces a 280 bit digest for a given input of arbitrary length.

Input (of arbitrary length)

RHA Function

280 bits of jibber-jabber

What happens inside RHA Function ?

Message(X) = | X_0 | X_1 | X_2 | X_3 | ...... | X_{n-2} | X_{n-1} | X_n |

PADDING

240 Bits

X_i

120 Bits

Y_{i-1}

II

Compression Function

IV, when i=0

$0 \leq i < m$

Y_i 120 Bits

Merkel-Damgård Structure

280 Bits

H(X)

What happens inside Compression Function ?

1) Message Schedule

2) Round Function

# Message Schedule

For each block(Xi) of Message(X) of length 240 bits, we generate 80 Keywords(W) in the following way:

W[0] = Xi[0]	W[10] = W[2]<<3	W[20] = W[12]<<4	W[30] = W[22]<<2
W[1] = Xi[1]	W[11] = W[3]>>4	W[21] = W[13]>>3	W[31] = W[23]>>1
W[2] = Xi[2]	W[12] = W[4]<<4	W[22] = W[14]<<2	W[32] = W[24]<<1
W[3] = Xi[3]	W[13] = W[5]>>3	W[23] = W[15]>>1	W[33] = W[25]>>2
W[4] = Xi[4]	W[14] = W[6]<<2	W[24] = W[16]<<1	W[34] = W[26]<<3
W[5] = Xi[5]	W[15] = W[7]>>1	W[25] = W[17]>>2	W[35] = W[27]>>4
W[6] = Xi[6]	W[16] = W[8]<<1	W[26] = W[18]<<3	W[36] = W[28]<<4
W[7] = Xi[7]	W[17] = W[9]>>2	W[27] = W[19]>>4	W[37] = W[29]>>3
W[8] = W[0]<<1	W[18] = W[10]<<3	W[28] = W[20]<<4	W[38] = W[30]<<2
W[9] = W[1]>>2	W[19] = W[11]>>4	W[29] = W[21]>>3	W[39] = W[31]>>1

Round Function

Round Function carries the following operations 40 times for each Xi
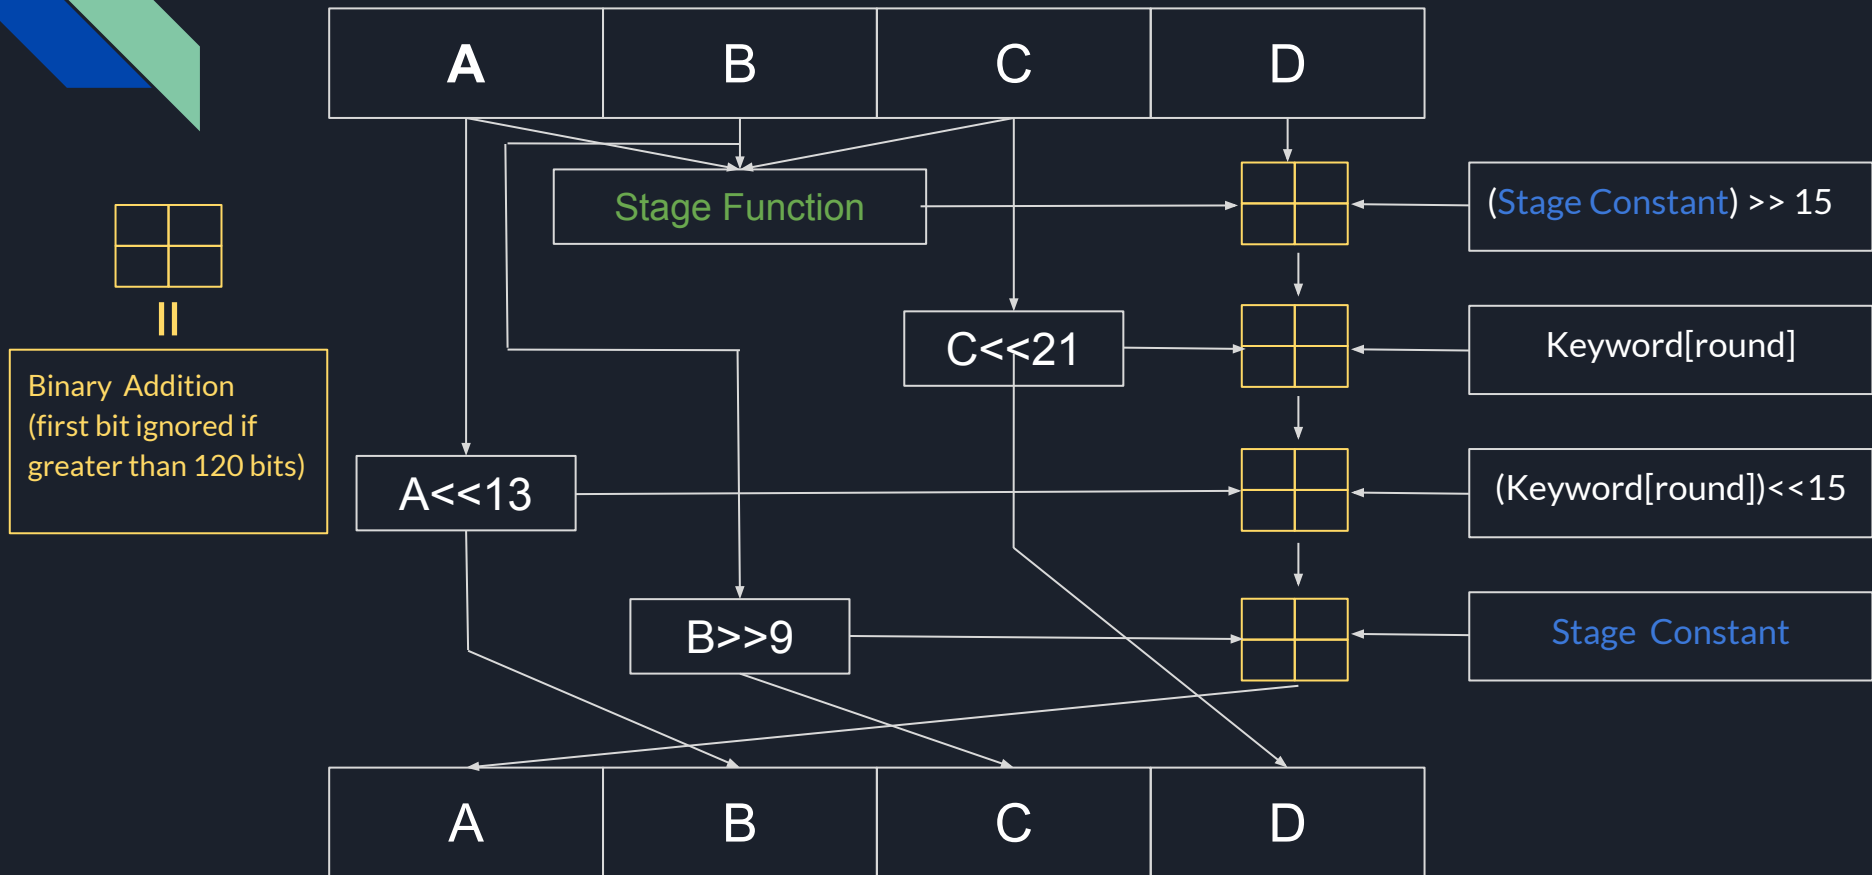

What is Stage Constant?

Stage constant is changed after every 10 rounds of operation.

For Rounds 0-9 : 7C20DD68

For Rounds 10-19 : DF89A8AF

For Rounds 20-21 : 99F61F5C

For Rounds 31-39 : A7AB02C9

What is Stage Function?

Stage Function is changed after every 10 rounds of operation.

For Rounds 0-9 : [A & B] ^ [(A<<7) & C] ^ [B & C]

For Rounds 10-19 : [B ^ C] & [(C>>21) | A] ^ [(B>>16) ^ A]

For Rounds 20-21 : [A & B] | [B & C] | [A & C]

For Rounds 31-39 : [A & C] & [(B<<12) | A] & [(C<<13) & (A>>10)]

Basically...

Compression function takes each block of the **Message(Xi)** and operates on it using **Message Schedule** and **Round function**.

The output of the compression function is the calculated hash of **280 Bits.**
